A DIFFERENT EECEPTORS FOR 5:
HYDEOXYTPYFAMINE (SEFOTENIN), A BIOGENIC HORMONE THAT FUNCTIONS AS A NECECTRANSMITTER, A HORMONE, AND A MITOGEN. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS THAT INHIBITS ADENYLATE CYCLASE ACTIVITY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             064204, 060996; Qe1617,

(GFCR) polypeptides of the invention. The proteins and their associated DNA sequences can be used to identify compounds which bind to GFCR polypeptides and in screening for compounds that modulate GFCR activity. By screening a human subject for the presence of mutations in GFCR DNA, GFCR-related disorder or a genetic predisposition can be diagnosed. The sequences can also be used for treatment and prevention of mental disorders such as schizophrenia, attention deficit disorder, anxiety, depression, dementia and bipolar disorder, neurological disorders such as huntington's disease, Parkinson's disease and Tourette's syndrome, metabolic disorders such as obesity, anorexia and type 2 diabetes, cardiovascular disorders such as thrombosis, myocardial infarction, cardiovyopathy and atherosclerosis, viral infections caused by HIV and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequences AAU25554-AAU25616 represent human G-protein coupled receptor (GPCR) polypeptides of the invention.                                                                                                                                                              This invention describes a novel human brain-derived G protein receptor gene and its encoding protein, designated SERALPHA. The receptor or cells expressing the receptor are used to develop new medicines, chemicals and technologies, and to devaluate existing medicines and technologies.
                                                                                                                                                                                                                                              Disclosure; Page 4; 8pp; German.
                                                                                                                                                                                                                                                                                     Gene encoding a protein of the G protein receptor super family, having homology to neurotransmitter receptors is useful to develop new medicaments -

The endogenous and non-endogenous, constitutively activated versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic agents for treating diseases related to GPCR, e.g. lung cancer. Non-endogenous version of human GPCRs are also utilized in research settings and in vitro and in vivo system, incorporating GPCRs can be utilised to elucidate and understand the roles these receptors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to nine human guanosine triphosphate binding protein (G protein)-coupled receptors designated GPRv8, GPRv12, GPRv16, GPRv21, GPRv40, GPRv47, GPRv47, GPRv51, GPPv71 and GPPv72, and to the genes encoding them. These genes and proteins and antibodies against the protein are useful in the treatment, prevention, diagnosis and investigation of diseases associated with G protein-coupled receptors, including cancer, cirrhosis of the liver and Alzheimer's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 6
                    The invention relates to an isolated polynucleotide encoding an alphala adrenergic receptor-like G-protein coupled receptor (GPCR) polypeptide, the encoded polypeptide, fragments, derivatives and allelic variants. Also include are an expression vector comprising the polynucleotide, a host cell containing the vector, screening for therapeutic agents which decrease or increase the activity of the receptor by binding a test agent to the protein and determining whether the activity is deceased or increased. A modulator of the receptor is useful for treating alphala adrenergic receptor-like GPCR disorder such as peripheral or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   hypertrophy. The receptor, polynucleotide or modulator is useful for treating disorders such as bacterial, fungal, protozoan, and viral infections, particularly those caused by HIV (human immunodeficiency virus), pain, cancer, anorexia, bulimia, aschma, Parkinson's diseases, obesity, acute heart failure, hypotension, hypertension, urinary retention, osteoporosia, angina pectoris, myocardial infarction, ulcer allergy, benign prostatic hypertrophy, and psychotic and neurological disorders, including anxiety, schizophrenia, manic depression, delirium, dementia, severe mental retardation, and dyskinesias, such authuntington's disease and Tourette's syndrome. The polynucleotide is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       useful in diagnostic assays for detecting diseases and abnormalities or susceptibility to disease and abnormalities related to the presence of mutations in the gene. The protein is useful to identify test compounds which may act as agonists or antagonists, and for raising antibodies which can block the receptor and effectively prevent ligand binding. The present sequence is the alphala adrenergic receptor-like GPCR.
                                       G-protein coupled receptor; GPCR; hRUP15-Gs; agonist;
                                                                                 GPCR-Gs fusion protein, hRUP15-GS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

This represents a G-protein coupled receptor family polypeptide, IGS1. The IGS1 protein can be expressed by standard recombinant methodology. IGS1 is useful for inducing immunological response in a mammal, as vaccine. IGS1 polynucleotides and polypeptides and its modulators are useful for treating psychiatric and central nervous system disorders especially movement disorders, such as tics, tremor, Tourette's syndrogeneral percentages.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              movement disorder; tremor; Tourette's syndrome; Parkinson's disease; Huntington's disease; dyskinesia; dystonia; spasm; neuroleptic; huma nootropic; anticonvulsant; relaxant; vaccine; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             G-protein coupled receptor; IGS1; psychiatric; central nervous system;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            family, such as human adrenergic alpha-la receptor. The invention provides AXOR69 polypeptides and polypucticetides, and methods for producing such polypeptides by recombinant techniques. Also provided are methods for using the AXOR69 polypeptides and polypucticetides to screen for compounds that stimulate or inhibit AXOR69 levels or activity. The polypeptides, polypuctotides, agonists and antagonists are used to treat conditions associated with AXOR69 imbalance, including bacterial, fungal, protozoan and viral infections, particularly HIV-1 and HIV-2 infections, pain, cancer, diabetes, obesity, ancrexia, bulimia, asthma, Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       disease, acute heart failure, hypotension, hypertension, urinary retention, osteoporosis, angina pectoris, myocardial infarction, stroke, ulcers, asthma, allergies, benign prostatic hypertrophy, migraine, vomiting, psychotic and neurological disorders, including anxiety, schizophrenia, manic depression, depression, delirium, dementia and severe mental retardation, and dyskinesias such as Huntington's disease and Gilles de la Tourette syndrome.                                     versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agenists or partial agenists having applicability as therafeutic agents for treating diseases related to GPCR, e.g. lung cancer. Non-endogenous version of human GPCRs are also utilized in research settings and in vitro and in vivo system, incorporating GPCRs can be utilised to elucidate and understand the roles these receptors

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  disease,), brain disorders (e.g., multiple sclerosis, Parkinson's disease,), hormonal disorders (diabetes mellitus, hyperthyroidism,), immune disorders (including autoimmune diseases such as rheumatoid arthritis, osteoarthritis,), liver disorders, viral diseases such as hepatocellular cancer, pain disorders (e.g., pain associated with surgery or chest pain,), metabolic disorders (obesity, cachexia,). The 65499 or 58875 molecules are useful as surrogate markers, as pharmacodyanamic markers and as pharmacogenomic markers. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              disorders (including cancer e.g., carcinoma, sarcoma), bone metabolism disorders (e.g., osteoporosis, rickets,), haematopoletic disorders (such as chronic myelogenous leukemia, acute promyeloid leukemia,), cardiovascular disorders (e.g., ischaemic heart disease, myocardial infarction, etc), endothelial cell disorder (e.g., psoriagis, Grave's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel seven transmembrane domain receptors, designated 65499 or 58875. The 65499 and 58875 polypeptides can be expressed by standard recombinant methodology. The polypeptides, encoding polynucleotides and modulators are useful for controlling G protein coupled receptor-related disorders, and as a novel diagnostic target and therapeutic agent in treatment and diagnosis of 65499 or 58875 mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel isolated 65499 or 58875 polypeptide, novel seven transmembrane domain receptors, useful as reagents or targets for treatment or diagnosis of rheumatoid arthritis, ischemic heart disease, Grave's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                or related disorders such as cellular proliferative and differentiative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 4; Fig 1a-b; 132pp; English.

The invention relates to isolated human G-protein coupled receptor (GCREC) polypeptides and their biologically active fragments. GCREC and protein is useful in treating a disease or condition associated with an increase or decrease in expression of functional GCREC. The GCREC's are useful in the diagnosis, treatment and prevention of cell proliferative disorders (cancer, leukaemia, melanoma); neurological disorders (stroke.

                                                                                                                                                                                                                                                                                                                                     Sequences AAU2554-AAU25616 represent human G-protein coupled receptor (GPCR) polypeptides of the invention. The proteins and their associated DNA sequences can be used to identify compounds which bind to GPCR polypeptides and in screening for compounds that modulate GPCR activity. By screening a human subject for the presence of mutations in GPCP DNA, a GPCR-related disorder or a genetic predisposition can be diagnosed. The sequences can also be used for treatment and prevention of mental disorders such as schizophrenia, attention deficit disorder, saxiety, depression, dementia and bipolar disorder, neurological disorders such as Huntington's disease, parkinson's disease and Tourette's syndrome, metabolic disorders such as chesity, ancrexia and type 2 diabetes, cardiovascular disorders such as thrombosis, myocardial infarction, cardiomyopathy and atherosclerosis, viral infections caused by HIV and

Component length polymorphism (RFLP) associated with certain disorders, and including the capacity of cell as well as for genetic mapping. The nucleic acid is useful for the receptor, in the design of antisense and collustry of cells to expression of the expression of the expression of more to detect for the suppression of the expression of more and to cultured cell, tissue or an animal, for therapeutic purposes and to comprove a model for diseases of conditions characterised by aberrant receptor, it is also useful in hybridisation assays to detect the capacity of cells to express nGPCR-x, in diagnosis, to identify the monologues of nGPCR-x in other animals, for screening for restriction fragment length polymorphism (RFLP) associated with certain disorders, as well as for genetic mapping. The nucleic acid is useful in gene therapy. The nGPCR is useful as a research tool for identification, characterisation and purification of interacting, regulatory proteins. The antibody is useful for therapeutic and diagnostic purposes, and in cureat or prevent unregulated cellular growth, such as cancer mysoedema), renal failure, inflammatory conditions (e.g., Crohn's diseases), diseases enlated cellular growth, such as cancer diseases), diseases related to cell differentiation and homeostasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             06-APR-2000; 2000US-195093P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
The present sequence represents histamine H2 receptor (H2RH) isolated from Incyte Clone 1722180 from the human bladder cDNA library (BLADNOT06). A host cell, comprising a vector which contains the nucleic acid encoding H2RH, can be used to produce the H2HR. An antibody which specifically binds the H2RH can be used to detect and quantify H2HR in a biological sample. An antagonist which specifically binds to and modulates the activity of H2RH can be used in a pharmaceutical composition for treating inflammatory disease, gastric conditions, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             rheumatoid arthritis, autoimmune disorders, movement disorders, central nervous system disorders (e.g., stroke, Huntington's disease, Tourette', Syndrome, Parkinson's disease, Alzheimer's disease), infections, such aviral infections caused by HIV-1 or HIV-2 (human immunodeficiency virus, metabolic and cardiovascular diseases and disorders (e.g., type 2 diabetes, obesity, hypotension, hypertension, thrombosis, myocardial infarction, atherosclerosis), proliferative diseases and cancers, hyperproliferative disorders (such as psoriasis), hormonal disorders (e.g., polycystic ovarian syndrome, alopecia), and sexual dysfunction. The present sequence represents an n-GPCR of the invention.

The nervous conditions include Alzheimer's disease, ataxia, Eaton-Lambert syndrome, epilepsy, myasthenia gravis, and Parkinson's disease. The antagonist may also be used to treat infections or inflammation of the urinary tract and bladder. It may also be used to modulate HJHP activity in endothelial cells of the cardiovascular system and treat diseases such as arteriosclerosis, cardiomyopathy, endocarditis, and ischaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
